

7X19 Aircraft Cable

Very Flexible

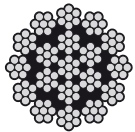

Used when flexibility and fatigue are concerns. Aircraft controls, running rigging on sailboats, exercise equipment, winches and garage doors are all common applications.

7X7 Aircraft Cable

Moderately Flexible

For use where extreme flexibility is not necessary. Commonly used in aircraft and automotive controls, it performs highly in a wide range of mechanical applications

19X7 Aircraft Cable

Non Rotating Very Flexible

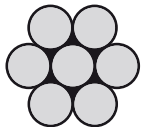

Used when a single line hoisting operation is necessary. Standard equipment on helicopter rescue winch applications.

3X3 Aircraft Cable

Flexible

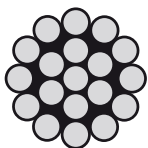

Small diameter, flexible construction for specialized applications

1X7 Aircraft Cable

Non flexible

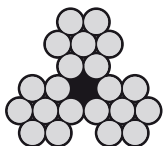

For straight load applications, in smaller diameters used as fishing leaders and line. In larger diameters it is used for guy wire and messenger strand applications

1X19 Aircraft Cable

Non flexible

Widely used as standing rigging on sail boats. It is also well suited for push-pull, and guying applications.

3X7 Aircraft Cable

Flexible

A combination of three 1x7 strands. Very flexible in small diameters for aircraft control.
